SU-PER[®] Glucosamine C.S.

*Recommended to Support and Maintain
Healthy Joint Function!*

High quality Glucosamine combined with low molecular weight Chondroitin Sulfate, to support connective tissues and normal joint function.

Glucosamine and Chondroitin Sulfate are by far the two most popular joint support nutrients - and for good reason.

These two nutrients work together to provide multiple benefits to the joint in terms of repair and maintenance.

SU-PER Glucosamine C.S. provides both Glucosamine and Chondroitin Sulfate in the forms most easily digested and utilized by the horse, and at a price that makes it economical to feed on a daily basis.

Horses naturally put significant strain on their joints. Age, activity level, inflammation in the joint, and other factors may play a role in just how much wear the joint cartilage takes on a daily basis. As age and/or activity levels increase, the need for joint support increase as well.

Glucosamine is an amino sugar that functions as the primary building block of joint nutrients. Glucosamine works to create new connective tissues, as well as repair damaged cartilage. Studies suggest that it helps to limit normal inflammatory response when joint trauma occurs. And it is an essential nutrient to help in the formulation of natural Chondroitin Sulfate and

Hyaluronic Acid - the substances that help create the viscous fluid cushion within the joint to help ease impact and lessen friction. Glucosamine is truly an all-in-one joint nutrient, and necessary for maintaining healthy connective tissues.

Chondroitin Sulfate provides some of the same benefits as Glucosamine in terms of protecting connective tissues from damage and helping with a normal inflammatory response. However, Chondroitin has the unique ability to help create synovial fluid in the joints. This is the fluid in healthy joints that provides a "cushion", limiting friction within the joint. It also works to lubricate the surfaces of the cartilage, allowing for smooth and efficient movement. A healthy amount of synovial fluid is important for horses of any age or discipline to help ensure that the joint is not only prepared for movement, but protected against impact or compression.

The Chondroitin in *SU-PER Glucosamine C.S.* comes from Collagen Type II - a highly absorbable source of low molecular weight Chondroitin. It also supplies a small amount of naturally occurring Hyaluronic Acid which also aids in producing synovial fluid in the joints. Typical sources of Chondroitin Sulfate, such as bovine or porcine cartilage, can have very poor absorption rates due to the large molecule size. Collagen Type II provides Chondroitin in an undenatured form, meaning that it is easily digested and utilized by the horse, providing more benefits even at a lower feeding amount.

While some other Gateway supplements are designed for more severe joint issues, *SU-PER Glucosamine C.S.* is the perfect choice for providing joint support to active horses or seniors who may have some minor joint discomfort.

It is also a great maintenance supplement to help ensure healthy joints remain at peak condition, such as for horses with a previous history of joint issues.

SU-PER Glucosamine C.S. is available in both a powder or liquid form, so that you can choose the product that best fits your feeding regimen.

NOTE: If your horse is experiencing any moderate to severe joint issues, please feel free to contact us for advice on more powerful and complete joint supplement options for your specific needs.
