

SU-PER[®] Thrush

Results typically seen in a few days!

A concentrated liquid for recurring thrush, or for use in stables with moist or saturated bedding.

Thrush is a bacterial or fungal infection of the horse's frog by organisms that thrive in moist, unclean environments. Horses kept in confined spaces are often susceptible, but it can happen anywhere the horses hooves are exposed to wet conditions for prolonged periods. Thrush can be a recurring issue after the initial infection, even if the environment is kept clean and dry from that point forward.

The signs of thrush are unmistakable - it produces a foul-smelling black discharge, and is painful to the horse when pressure is applied. Hind feet seem to be more often effected, and are usually the first place to check if you suspect thrush.

SU-PER[®] Thrush can help eliminate thrush and keep fungus and bacteria at bay.

Saturate the area twice daily for a minimum of three days for best results. Severe cases of thrush may require up to 2 weeks of treatment, so continue as long as necessary to reduce the chance of the reoccurrence of thrush in the area.
